How to read our product code: Example PU500 24/48

PU500 = Family code

24 = input voltage code 24

48 = Output voltage 48 V

FEATURES

Overvoltage protection OVP

The output voltage is limited to 15 % over nominal output voltage by an extra regulation circuit.

External output voltage sense

External sense is used when the voltage regulation at the load is critical. The sense can compensate voltage drops up to 5% of the nominal voltage.

Remote sense

External sense is used when the voltage regulation at the load is critical. The sense can compensate voltage drops up to 5% of the nominal voltage.

Over / Under voltage alarm

The built in relay changes to alarm state if the converter output voltage is not within 90 to 115 % of nominal output. The user can select NO or NC relay function. The relay rating is 30 V 0.5 A (d.c. or a.c.)

Inhibit input / Power down

This input allows remote start and shutdown of the converter by a signal voltage of 5 to 12V. Max 35mA.

OPTIONAL FEATURES

Output with series diode

Use the series diode output when the output is connected in parallel with other power supplies to achieve redundancy. The output current is derated with 10% on 24 to 48 V outputs.

Inrush current limit with NTC

Reduces the inrush current during start up. The input voltage range will be affected. Only available on 110 & 220 input code.

Conformally coating

For environment with high non condensing humidity max 85 % RH.

Train input

Input voltage range according to train standard EN 50155 and IEC 60571. For train 36V use standard B-range and for 110V use standard C-range.
